## IPConvert

IPConvert is a portable application. It works with both, Windows XP and Windows Vista. The first thing you will notice is that the application has a simple and not too cluttered appearance. The interface is made from a single window that consists of a plain and simple layout. All you need to do is write the IPv4 address you want to convert and click a button to get the conversion result. The layout is made of three main sections. The top contains the IPv4 address input area,

where you write the IPv4 address you want to convert. To the left you will find the icon "Convert", while to the right the result area. In the upper-right corner of the window you can see the version and compilation date. The information displayed in the output area is easy to understand. The results contain the IPv6 address, the IPv6 address shorthand, the IPv6 dot notation and IPv6 full address. The program's features: \* Since installation is not required, you can just drop the executable file anywhere on the hard disk and run it. \*

IPConvert is not a virus, and therefore the program is not dangerous for your PC. \*

IPConvert does not add entries to the Windows Registry, thus minimizing the risk of system errors. \* Plus, the program does not keep leftover files on the hard disk after program removal. \* Since the program uses a standard window, it does not have any resource problems. \* IPConvert has not been updated in a long time, and it's therefore a good idea to make a backup of your original configuration prior to a conversion. \* The application comes in 3 versions. Windows

XP, Windows Vista and Windows 7. \* Running time is good, the program does not affect the overall performance of the computer. \* No download manager or other adware. \* The program has no tutorial to learn how to use it. You can choose to jump to the "Help" page. \* The user can have the possibility to save the converted address in any format they want. \* The user can copy the converted address to the clipboard or save it in any plain text document. \* The user can copy the converted address to the clipboard or save it in any

plain text document. \* The user can copy the converted address to the clipboard or save it in any plain text document. \* The user can copy the converted address to the clipboard or save it in any plain text document. What's

## **IPConvert (LifeTime) Activation Code**

IPConvert is a lightweight and portable piece of software that is able to convert an IPv4 address to IPv6 simply and rapidly. Since installation is not a requirement, you can just drop the executable file anywhere on the hard disk and run it. It is also possible to move IPConvert to a USB flash drive or similar storage unit, in order to run it on any workstation with minimum effort. What's important to mention is that IPConvert does not add entries to the Windows Registry, thus

minimizing the risk of system errors. Plus, leftover files are not kept on the hard disk after program removal. The interface of the application is made from a standard window with a plain and simple layout. All you have to do is write the IPv4 address and click a button to convert it. Results reveal the IPv6 full and shorthand address, along with the IPv6 and dot notation full and shorthand address. There are no other options available through this program. For example, you cannot copy the converted addresses to the Clipboard or save them to a

plain text document for further scrutiny. We must also take into account that the app has not been updated for a very long time. We have noticed a minimal CPU and system memory consumption during IPConvert's runtime, thus the tool does not affect the overall performance of the computer. It has a good response time and performs conversion tasks rapidly and without errors. Thanks to its overall simplicity, first-time users can quickly learn how to work with IPConvert.
